Skills

- **Languages:** Java, Python, Go, TypeScript, SQL
- **Backend:** Spring Boot, Django, FastAPI, REST APIs
- **AI & Agentic Tooling:** LiteLLM, Pydantic AI, OpenAI API, RAG, Vector Database
- **Cloud & Data:** SAP BTP, Redis, Cloud Foundry, PostgreSQL
- **DevOps:** Docker, Jenkins, Git, SonarQube, CI/CD
- **Architecture:** SOAP, Microservices, Event-Driven Patterns

Education

M.S. in Software Engineering & Data Science

Université de Bretagne Occidentale (UBO)
Sept 2025 – Sept 2026

Software Engineering Degree

Institut National des Postes et Télécommunications (INPT)
2023 – 2025

Classes Préparatoires (CPGE)

Maths & Physics (MP)
2021 – 2023
Ranked 15th nationally

Languages

English C1
French Fluent
German B1

Hobbies

Football
Chess
Trail running
Travel

Summary

Full-Stack Software Engineer focused on Java/Spring Boot backend systems, cloud services, and AI tooling. Completed end-of-studies internship at SAP France building data pipelines and chatbot tools on SAP BTP. Graduating September 2026; seeking a full-time Software Engineer role.

Experience

Software Engineer Intern at SAP France

Apr 2026 – Sept 2026 Paris, France

- Built a Java Spring Boot pipeline on SAP BTP aggregating S/4HANA records and remote OData/REST ETL logs into uniform JSON schemas; applied pagination to control memory usage and Redis caching to cut API latency.
- Built an AI tool (Python/A2A) with YAML capability specs, enabling Joule chatbot to query backend endpoints by execution ID and display structured Markdown diagnostic reports.
- Set up automated Jenkins CI/CD pipelines deploying to Cloud Foundry, expanding unit test coverage and enforcing SonarQube quality gates.

Software Engineer Intern at European Institute for Marine Studies

Oct 2025 – Jan 2026 Brest, France

- Built an interactive oceanographic dashboard in Python (Panel, Bokeh, Pandas) visualizing sea surface temperature, currents, and pH on interactive maps and plots for 20+ researchers.
- Combined multi-sensor data streams into unified Pandas DataFrames, optimizing dashboard data reload times.

Software Engineer Intern at CIEMS

Jun 2024 – Aug 2024 Remote

- Developed an automated customer offer engine for an auto insurer using Django and PostgreSQL, integrating OpenAI API to generate personalized policy recommendations.
- Built asynchronous Celery and Redis background pipelines for model inference, Jinja2 PDF report generation, and automated Twilio notifications.

Projects

go-fantasy-pl — Open-Source Sports Data API Client

Go, REST API, Redis abdoanss.github.io/projects/go-fantasy-pl

- Authored and maintain a typed Go client library for the Fantasy Premier League API, utilizing Goroutines, channels, and context timeouts for concurrent retrieval.
- Implemented conformance testing making live HTTP requests against official FPL endpoints to validate struct schema parity, alongside unit tests.
- Built a token-bucket rate limiter with in-memory TTL caching and optional Redis backend, preventing API throttling during bulk fetches.

Certifications

Oracle Certified Professional, Java SE 11 Developer

January 2026

Google Cloud Professional Cloud Architect

In Progress (Expected Oct 2026)
