Skills

- **Languages:** Java, Python, Go, TypeScript, SQL
- **Backend:** Spring Boot, Django, FastAPI, REST API, SOAP, Microservices, Event-Driven
- **Cloud & Data:** SAP BTP, Cloud Foundry, PostgreSQL, Redis
- **AI & LLM Tooling:** LiteLLM, Pydantic AI, OpenAI API, RAG, Vector Database
- **DevOps:** Docker, Jenkins, Git, SonarQube, CI/CD

Education

M.S. in Software Engineering & Data Science

Université de Bretagne Occidentale (UBO)
Sept 2025 – Sept 2026

Software Engineering Degree

Institut National des Postes et Télécommunications (INPT)
2023 – 2025

Classes Préparatoires (CPGE)

Maths & Physics (MP)
2021 – 2023
Ranked 15th nationally

Languages

English C1
French Fluent
German B1

Hobbies

Football
Chess
Trail running
Travel

Summary

Software Engineer with experience building backend and cloud applications in Java/Spring Boot, Python, and Go. Experienced in data pipelines, microservices, event-driven systems, and AI integration on cloud platforms. Oracle Certified Professional, Java SE 11 Developer.

Experience

SAP France — Software Engineer Intern

Apr 2026 – Sept 2026

Paris, France

- Built a Java/Spring Boot pipeline on SAP BTP aggregating S/4HANA records and OData/REST ETL logs from 4 source systems into unified JSON schemas, processing ~50k records per run.
- Built a Python tool exposing unified ETL data to SAP Joule for natural-language troubleshooting, cutting diagnosis of failed ETL runs from minutes to seconds.
- Cut average endpoint latency by ~50% with Redis caching and pagination, keeping memory usage flat on large result sets.
- Built a logging feature that tracks who creates, runs, or edits system jobs and data configurations, a compliance and accountability capability requested by major enterprise clients.

European Institute for Marine Studies — Software Engineer Intern

Oct 2025 – Jan 2026

Brest, France

- Built an interactive oceanographic dashboard (Python, Panel, Bokeh) visualizing sea-surface temperature, currents, and pH for 20+ researchers.
- Integrated multi-sensor data streams into unified Pandas pipelines with automated cleaning, reducing dashboard reload time from ~30s to under 5s.

CIEMS — Software Engineer Intern

Jun 2024 – Aug 2024

Remote

- Built the Django/PostgreSQL backend for an automated insurance offer engine, decoupling ML inference into asynchronous Celery queues backed by Redis, keeping API responses under 200ms.
- Prototyped LLM-generated personalized messages via the OpenAI API with Twilio delivery, as an end-to-end proof of concept for the client.

Projects

go-fantasy-pl: Open-Source Library for a Premier League Football API

Go, REST API, Redis

abdoanss.github.io/projects/go-fantasy-pl

- Built and maintain a typed Go client for the Fantasy Premier League API using goroutines, channels, and context timeouts, running up to 50 concurrent requests.
- Added conformance tests calling live FPL endpoints to catch struct-schema drift, plus unit tests, bringing coverage to ~85%.
- Implemented a token-bucket rate limiter and a configurable caching layer (Redis when configured, in-memory fallback), preventing API throttling during bulk fetches.

Certifications

Oracle Certified Professional, Java SE 11 Developer

January 2026

Google Cloud Professional Cloud Architect

In progress, expected October 2026
